Subject: Microsoft Settlement

I think the proposed settlement is terrible.

In particular, III(J)(2) should not restrict distributions to "businesses".
The only real potential for competition to Microsoft comes from organizations that are too informal (and not-for-profit!) to be called businesses. Other non-business orgs (like the Government) should not be excluded, either.

Require MSFT to publish (on an unrestricted website!) the same API documentation that their internal application developers have.
